Dear Mr Thomson

Thank you so much for your very kind donation of £64.00 towards our Sheffield Scanner campaign.

I'm really glad that you have chosen to be part of this incredible project. Your gift has moved us one step closer to our ambition of bringing MRI-PET technology right here to Sheffield. We have been amazed by the response we have had to our Sheffield Scanner campaign so far, and Professor Shaw has asked me to pass on her personal thanks to you for your generosity.

Every year, more people are affected by devastating diseases like cancer, Alzheimer's, and Motor Neuron Disease. Our researchers have already made great strides in finding new ways to slow or halt the progression of some of the world's most awful diseases, and with your support we know we can achieve even more.

The Sheffield Scanner will be the first of its kind in Yorkshire, and one of only eight such facilities across the UK – five of which are used solely for dementia research. There is so much potential in MRI-PET technology, and we can't wait to start putting it to use.

The new scanner will open up exciting possibilities for improving diagnosis and treatment for a whole range of patients. It could give our researchers the ability to diagnose and treat neurodegenerative diseases much more quickly, transform treatment for cancer patients by helping doctors to target tumours more precisely, and reduce long-term disability in stroke patients by using MRI-PET technology to locate areas of the brain that could be saved, before it is too late to do so.

Your support will make a real and lasting difference to patients receiving treatment for these and many other diseases. And, as the new technology will give us a better understanding of the causes, effects and progression of disease, we hope that our research will save lives – not just here in Sheffield, but across the UK and beyond.

Thank you again for being part of this very special project. I'm looking forward to keeping you informed about the amazing things that your donation is helping to achieve.

With best wishes
